

Task

1. Create a new workspace at <http://play.appendto.com/>
2. Create a small HTML snippet that includes an unordered list, with each list item containing a paragraph and some styled text (bold, italic). Attach this HTML snippet into the page via a button on-click event
3. Detach the constructed HTML via a button, saving it to a variable, clone it and reattach it twice

Goal

1. Explore DOM modification through creating, inserting and removing elements from a document

Reference

1. <http://play.appendto.com/>

Advanced

1. Store the count of children in each parent element using the data method
