

Task

1. Create a new workspace on <http://play.appendto.com/>
2. Add an input button to your page and attach a click event
3. Add a button to your page and bind a click handler to it
4. In the click handler, make an request to [sample.html](http://play.appendto.com/sample.html)
5. Insert the returned html in a DIV in your page
6. Add a second button to your page and bind a click handler to it
7. In the click handler, make a JSON request to [sample.json](http://play.appendto.com/sample.json)
8. With the states array returned, create an UL
9. Append the UL to the div with the id content2

Goal

1. Be able to create AJAX requests and insert a block of html into the DOM

Reference

2. <http://play.appendto.com/>
3. <http://play.appendto.com/sample.html>
4. <http://play.appendto.com/sample.json>
